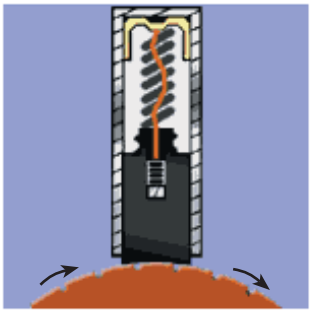
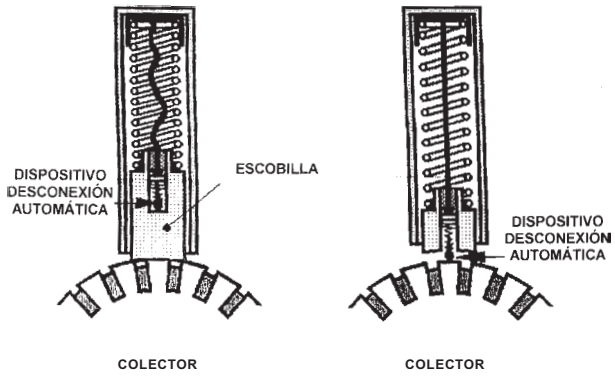
EL NUEVO DISPOSITIVO DE DESCONEXIÓN "AB" PARA ESCOBILLAS DE GRAFITO





Con el fin de evitar el deterioro o la destrucción de los pequeños motores eléctricos, se puede montar en las escobillas el NUEVO DISPOSITIVO DE DESCONEXIÓN "AB", que regula automáticamente el desgaste de las escobillas hasta que la sustitución de éstas se hace necesaria.
Así el control y mantenimiento de las escobillas es innecesario, ya que puede desconectarse automáticamente el motor, garantizando así una seguridad de funcionamiento óptimo.

Nuestro dispositivo de desconexión no está influido por la temperatura y puede aplicarse a todo tipo de motores universales desde pequeña potencia hasta fuerte intensidad.
No importa si la toma de corriente de la escobilla se realiza por cable o muelle.

Este sistema está diseñado principalmente para la aplicación en escobillas destinadas a máquinas herramientas electroportátiles y tipo electrodoméstico.

FUNCIONAMIENTO DEL DISPOSITIVO DE DESCONEXIÓN "AB"

Llegado el límite de desgaste de la escobilla, el sistema insertado en el interior sale y levanta la escobilla del colector, interrumpiendo así el paso de corriente y parando el motor. La concepción del dispositivo de desconexión se compone de un muelle micro de aleación especial y una pieza plástica. Su diseño evita su suelta y por ello cualquier fallo.

Todo ello permite la mayor seguridad a nuestro sistema en comparación con otros similares.

Existen cinco tipos dependiendo de la sección de la escobilla y la longitud residual necesaria.
